NEWS RELEASE

Mumbai, 21st July 2026

Dear Valued Customer,

The continued conflict in West Asia, elevated energy costs, rising feedstock prices, a weak Indian Rupee, increased sea freight, “*typhoon Bavi*” and disruptions to global shipping routes have significantly impacted the availability of Acetic Acid and other feedstocks in India. Inventories of Acetic Acid have largely dried up, leading to a steep increase in ex-tank prices at Indian ports.

Constrained by the limited availability of Acetic Acid, we have been compelled to undertake **production-cuts** across Ethyl Acetate and other Acetic Acid-based products until the situation normalizes. To offset the sharp increase in input costs and ensure continuity of supply, we are implementing the following revised list prices with immediate effect:

Product	Increase (₹/kg)	Revised List Price (₹/kg)
Ethyl Acetate (ETAC)	6.50	96.00
n-Propyl Acetate (NPAC)	25.00	170.00
n-Butyl Acetate (BUTAC)	10.00	125.00

In view of the production-cuts and the resultant limited product availability, supplies will be made on allocation basis. Fresh order bookings will be rationalised to align demand with available production, and allocations will be made based on product availability and existing business commitments.

We continue to monitor the situation closely and will keep you informed of any material developments. Our teams remain committed to supporting your business and ensuring the highest possible level of supply reliability under these exceptional circumstances.

We sincerely appreciate your continued trust and partnership.
